

Technical Requirements

Goccia di Voci

Choir

The choir is composed of 35-40 voices.

A concert may last 1 to 1.30 hours and can be divided into two parts.

Requirements

Goccia di Voci's rhythmical repertoire is not suitable for big churches. Ideal are churches that hold 200-300 people. Auditoriums, theatres, multipurpose rooms, and other venues can work, provided that they have good acoustics. A prior visit on site may be required.

In addition to the required stage space (see Stage Area, below) an adjacent room, which can be locked to ensure that personal belongings and travel funds can be left during the performance. This room also serves for voice warm-up.

Restrooms.

Non-carbonated water and cups would be appreciated.

Sound

Only at outdoor venues is sound reinforcement necessary (at least 4 panoramic microphones)

Lights

Where possible (in theatres, etc.) we perform in flat light (necessary colours: amber, orange, blue, green, red, purple). In any case, overly strong lighting is to be avoided.

Otherwise side-spotlights are necessary, high enough not to disturb the singers.

Neon lights are to be avoided.

Stage Area

At least 6 meters long and 3 meters deep.

If necessary the choir will bring and install special platforms.

Stage set-up, Sound Check and Rehearsal

The time required for installation and sound-check is 3 hours

Dismantling of stage

1 hour
